Founded in Sugar Land, Texas in 2017, ThreatGEN delivers a solution to bridge "the ICS Cybersecurity skills gap" utilizing its Red vs. Blue Training Solutions and ThreatGEN OT Security Services.

Red vs. Blue Training Solutions uses cutting-edge computer gamification in ThreatGEN® Red vs. Blue to provide an exciting & modernized approach to industrial cybersecurity training, both practical and cost effective!

ThreatGEN OT Security Services are delivered worldwide by world-renowned Operational Technology (OT) cybersecurity experts (we literally wrote the books industry uses) using strategically chosen partnerships to create a holistic service offering.

Other Services

- ThreatGEN OT Security Services
- Red vs. Blue 101 Course¹
- Red vs. Blue 201 Course

¹ Delivered both live and virtual.

ThreatGEN® Red vs. Blue

ThreatGEN® Red vs. Blue is the industry's first multi-player strategy computer game where players compete against each other, head-to-head, to take control/maintain control of a computer network. This is not a fiction-based game like those found on the consumer gaming market. This is a live, player vs. player

"gamified" training simulator, designed to teach cybersecurity skills in an immersive and interactive applied learning environment.

Differentiators

ThreatGEN® Red vs. Blue game play differentiators:

- Broad audience - beginner to intermediate
- Red / Blue team adversarial game play, playing against active opponents either A.I. or real life
- Interactive - 1-on-1 internet and local hot seat multiplayer
- **Single player, play as the red or blue team against the computer**

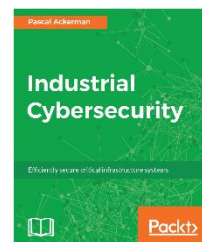

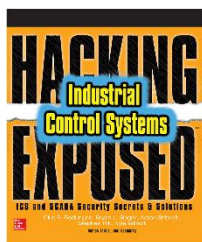

ThreatGEN® Red vs. Blue's differentiation from other training solutions on the market today include:

- Modern approach to learning - **cost effective**, accessible
- Based upon real-world experience from real OT security professionals
- Cybersecurity from the **hackers' perspective**
- Live, head-to-head learning
- **Apply concepts**, with in-game real-world cybersecurity advice and hints
- Learn, train, and exercise strategy

Why ThreatGEN Training Solutions

ThreatGEN's thought leadership in the OT security community brings a unique viewpoint to ThreatGEN® Red vs. Blue – few people in the world have more OT cybersecurity experience than ThreatGEN's professionals. In addition to having more than 10 years' experience each, our professionals are frequent presenters at industry conferences, ICS community contributors, and published authors. We wrote the book on industrial cybersecurity... literally.

Every single member of the ThreatGEN® Red vs. Blue development team comes from the OT cybersecurity community. ThreatGEN® Red vs. Blue was developed and tested with feedback from more than 300 beta testers in the cybersecurity community.
